K

What's new in KalamDesk 2.0

Only the new features since the first user guide, explained step by step, screen by screen.

Version 2.0 · 29 October 2026

Screenshots use demo data

Version 2.0 at a glance

Everything in the first guide still applies. This edition covers six additions.

NEW IN 2.0	WHAT IT DOES	FOR
Install as a phone app	Android, iPhone, laptops. Bottom bar, More sheet, offline notice, icon badge.	Everyone
Lock-screen notifications	New tasks, blockers, reminders and kudos on the lock screen. Opt-in, per phone.	Everyone
Photos and files you can open	Thumbnails, View and Download. Files kept safely in the database.	Everyone
Visit, session and workshop reports	Topics covered, students attended, teachers, class. New Visits page totals.	Everyone
Least-privilege access	Names-only People directory and simpler filters for employees and interns.	Employees, interns
Storage clean-up with approval	Warns at 80%, asks at 90%, oldest first. Optional Auto-rotate.	Group owners

How to read this guide

Each step has a screenshot. The red numbers on the screenshot match the numbered list under it. The **yellow highlight** shows what to look at or tap.

Who is each step for?

Everyone | Managers & founders | Group owners

Employees and interns need Parts 1 to 5 only.

Contents

Part 1 Install KalamDesk as a phone app

Part 2 Lock-screen notifications

Part 3 Photos and files you can actually open

Part 4 Reports for visits, training sessions and workshops

Part 5 What employees and interns see

Part 6 Storage: kept tidy, with your approval

Extra Upgrade checklist for whoever looks after the website

NEW · PART 1

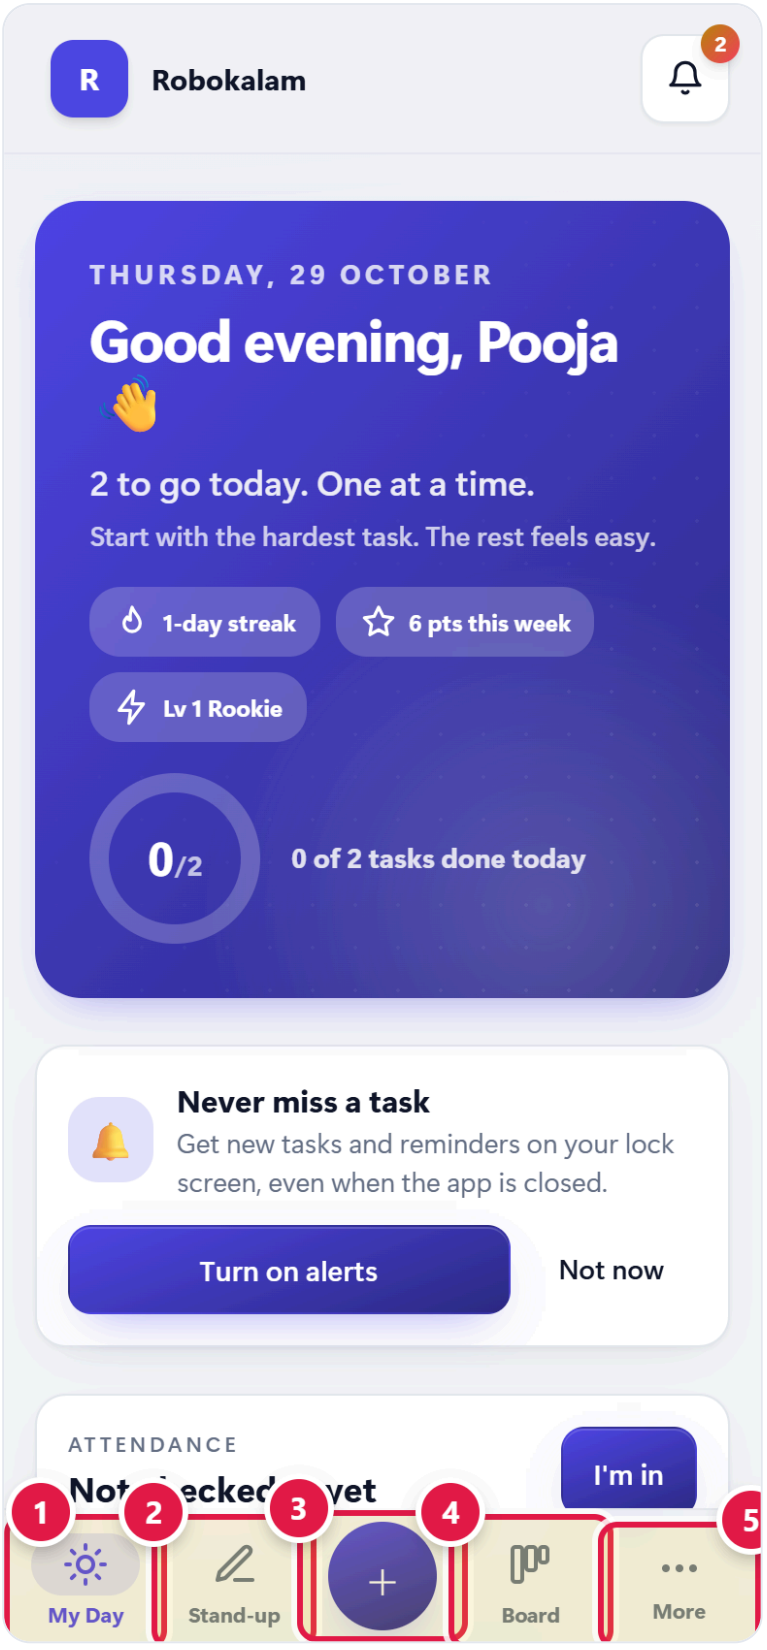

Install KalamDesk as a phone app

Open it from your home screen in one tap, full screen, with a layout built for thumbs. Works on Android, iPhone and laptops. No app store needed.

01 A layout made for phones

Everyone · About 1 min

On a phone, the left menu becomes a bar along the bottom. The three pages you use most are one tap away, and everything else is under **More**.

1. **My Day.** Your home screen. (Managers and founders get **Desk** here too.)
2. **Stand-up.** File your daily update.
3. **The big + button.** Add a task from any screen, in ten seconds. On a laptop, press `N` instead.
4. **Board.** Your tasks as cards.
5. **More.** Opens every other page, in one sheet (next step).

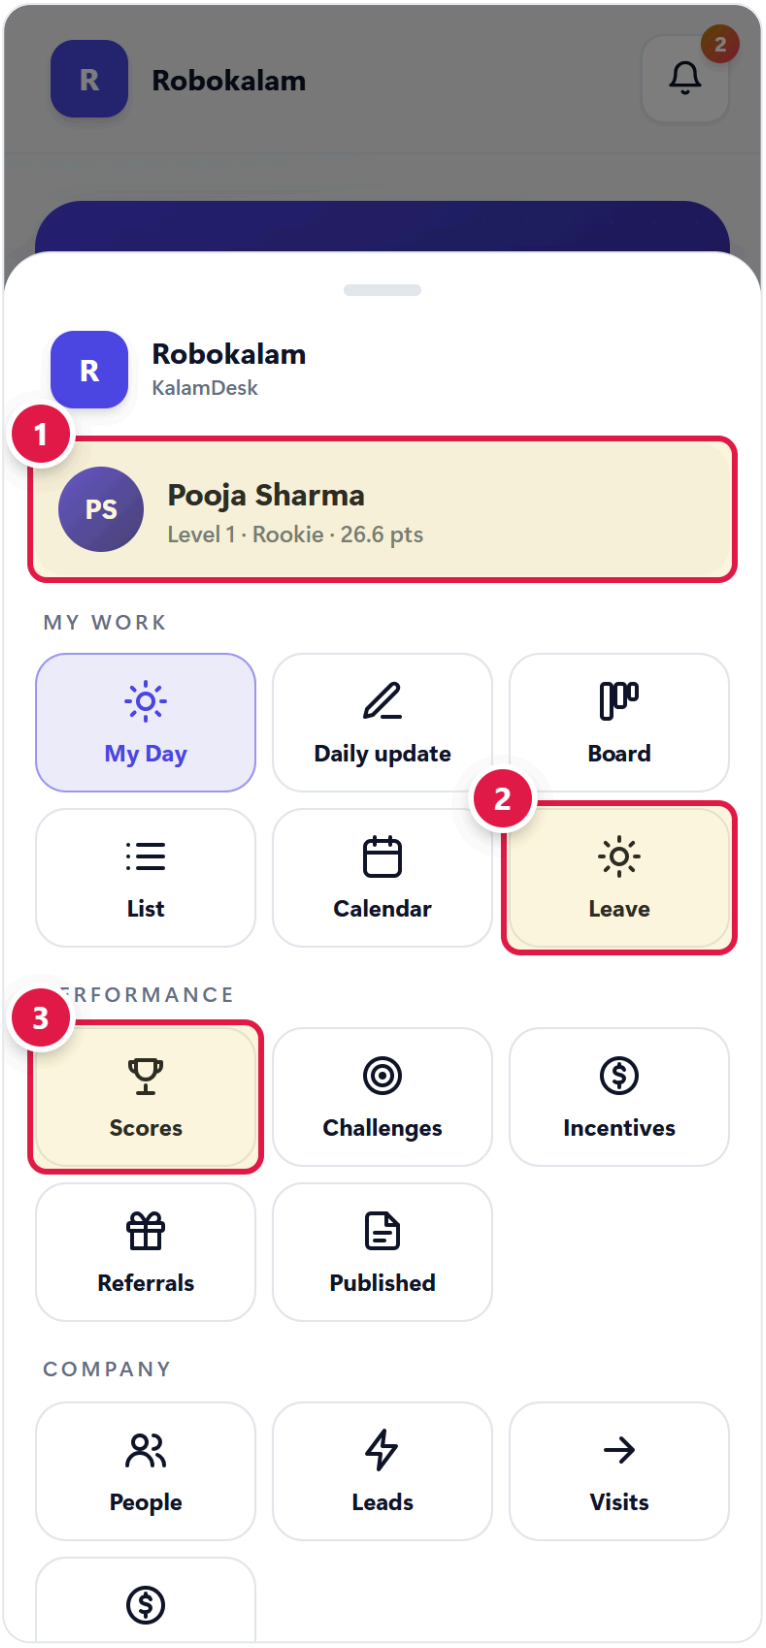

Good to know

- The bar stays put while you scroll, and it keeps clear of the notch and the home bar on newer phones.
- The My Day banner is shorter on a phone, so your tasks come into view sooner.

02 The More sheet: every page in one place

Everyone · About 1 min

Tap **More** and a sheet slides up with all the pages, grouped just like the desktop menu.

1 **Your card.** Your name, level and points. If you look after several organisations, the

organisation switcher sits just above it.

2. **A page tile.** Tap any tile, for example **Leave**, to open that page. The sheet closes by itself.

3. **Performance and Company groups.** Scores, Challenges, Incentives, Referrals, People, Leads, Visits, Expenses and more. Scroll down for **Settings**, **Sign out** and the install card.

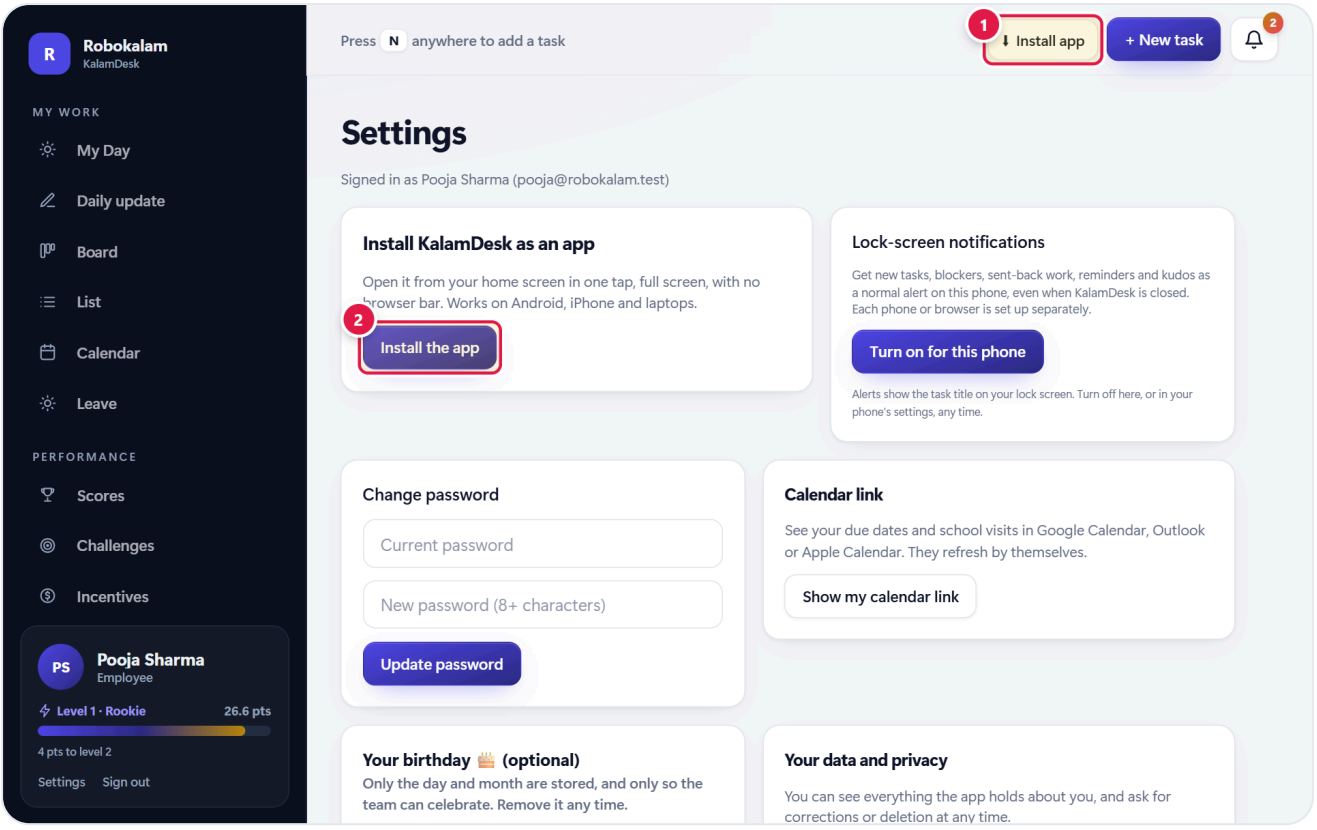

Good to know

- Tap the dark area above the sheet, or choose a page, to close it.

03 Install on Android or a laptop

Everyone · About 1 min

On Chrome or Edge, KalamDesk offers to install itself. You will see the button in two places.

1. **The Install app button** at the top of every screen. On a phone it shows as a small download arrow.

2. **Install the app** on the **Settings** page, under a short explanation.

Good to know

- Tap it, then confirm **Install**. KalamDesk now has its own icon on your home screen (or desktop) and opens full screen with no browser bar.
- Don't see the button? Open the browser menu (three dots) and choose **Install app** or **Add to Home screen**.
- Press and hold the icon on Android for shortcuts: **Add a task**

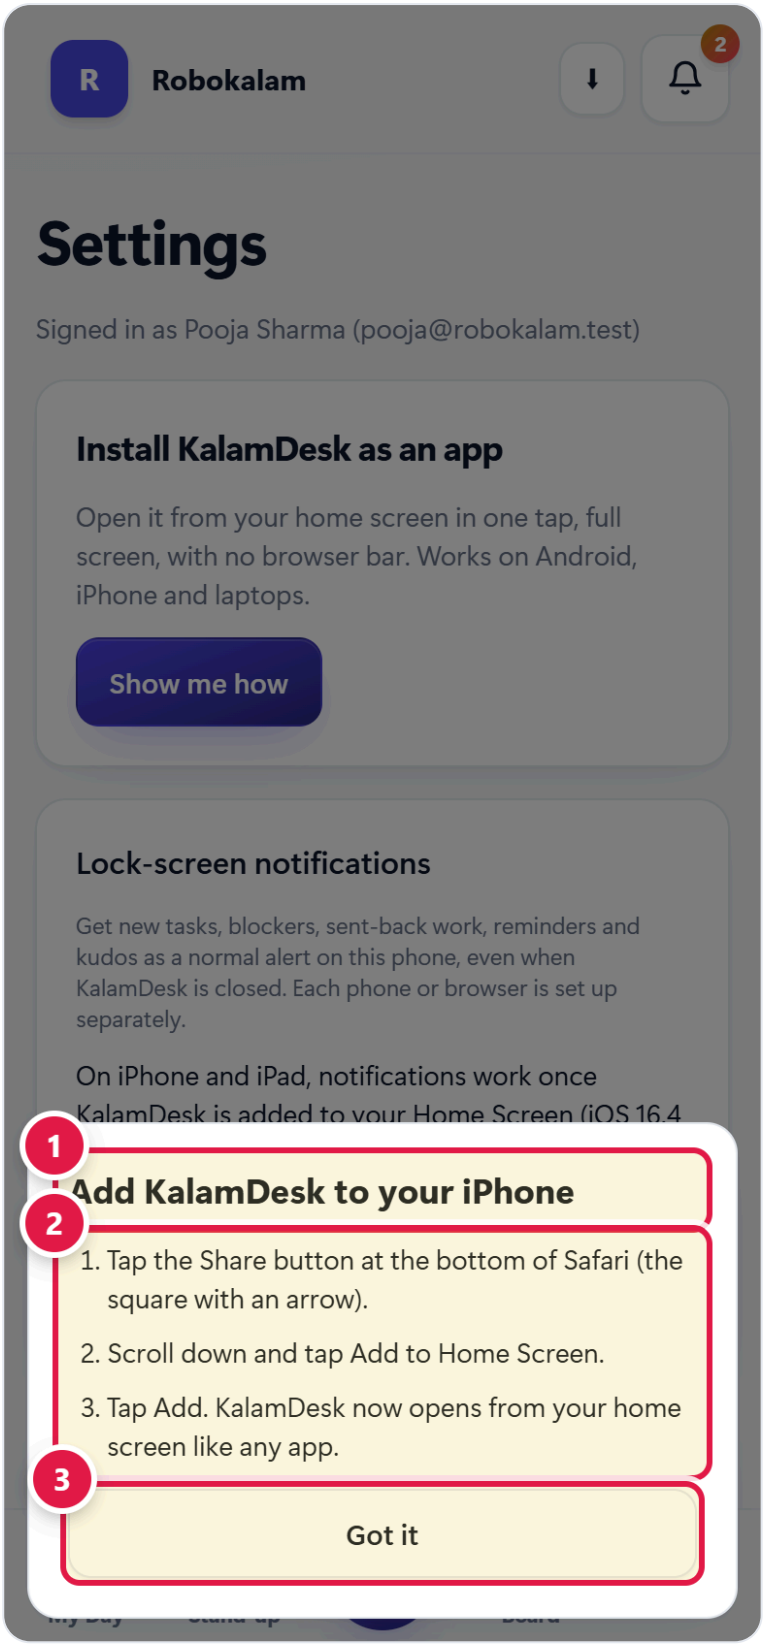

,
My Day
and
Daily update
.

- The icon shows a red number when you have unread notifications, on phones that support it.
- Installing needs the website to start with
  https
  , which your hosting already provides.

04 Install on iPhone or iPad

Everyone · About 1 min

Safari has no install button, so KalamDesk shows the steps instead. Open **Settings** in Safari and tap **Show me how**.

1. **The heading.** *Add KalamDesk to your iPhone*.

2. **The three steps.** Tap the **Share** button (the square with an arrow), then **Add to Home Screen**, then **Add**.

3. **Got it.** Closes the help.

Good to know

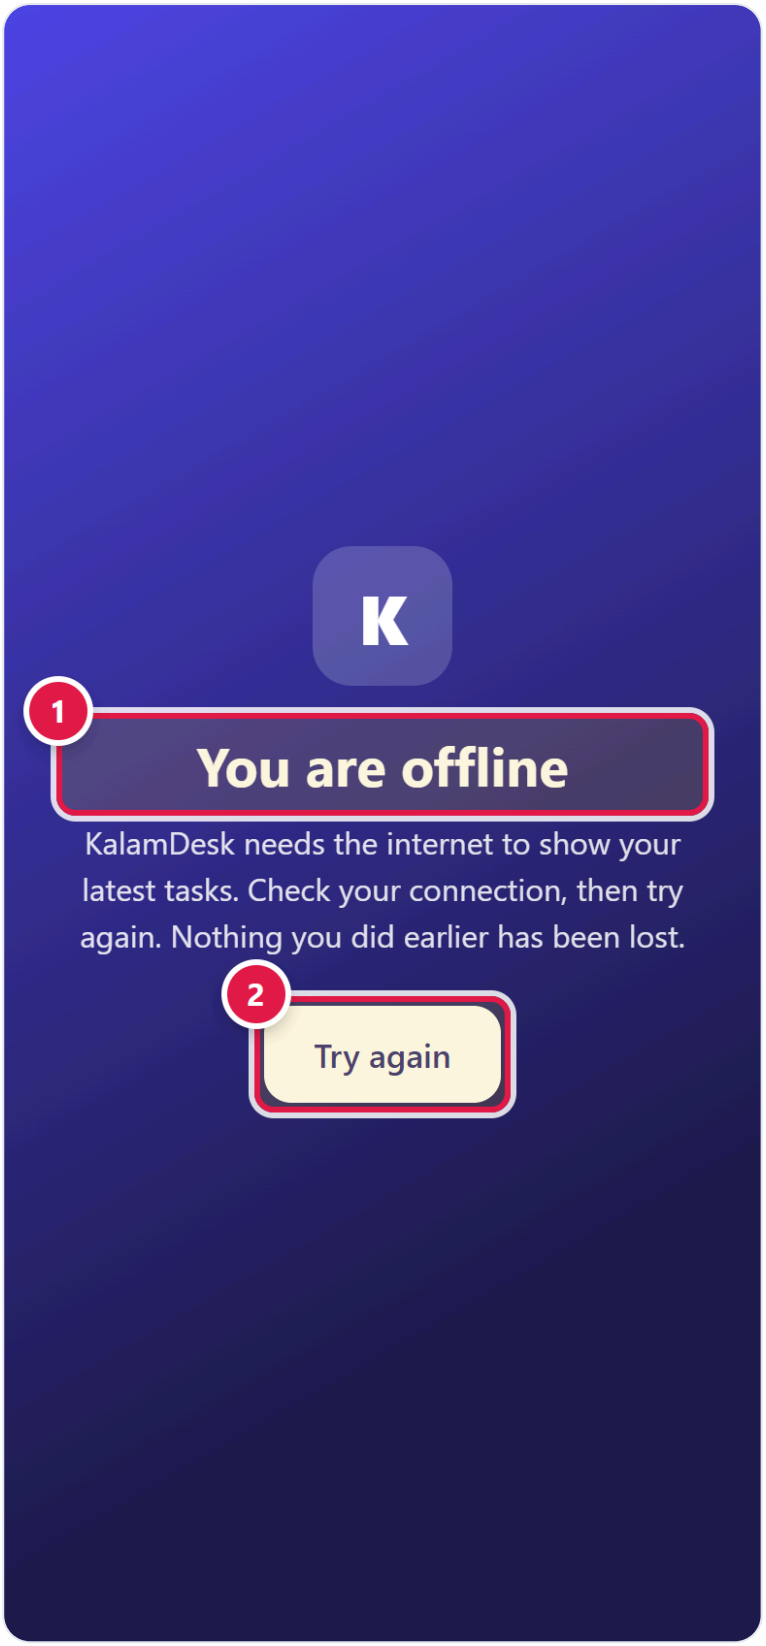

- Open KalamDesk from the new home-screen icon from now on. That is also what makes lock-screen alerts possible on iPhone.

05

When the phone loses its connection

Everyone · About 1 min

If you are offline, KalamDesk says so plainly instead of showing a browser error.

1 **You are offline.** Nothing you did earlier has been lost.

2 **Try again.** Reloads the page once your connection is back.

Good to know

- While you are offline, an orange bar at the top reminds you that changes will not save.
- For privacy, KalamDesk never stores your tasks or personal data on the phone. Only its icons and styling are kept for speed.

NEW · PART 2

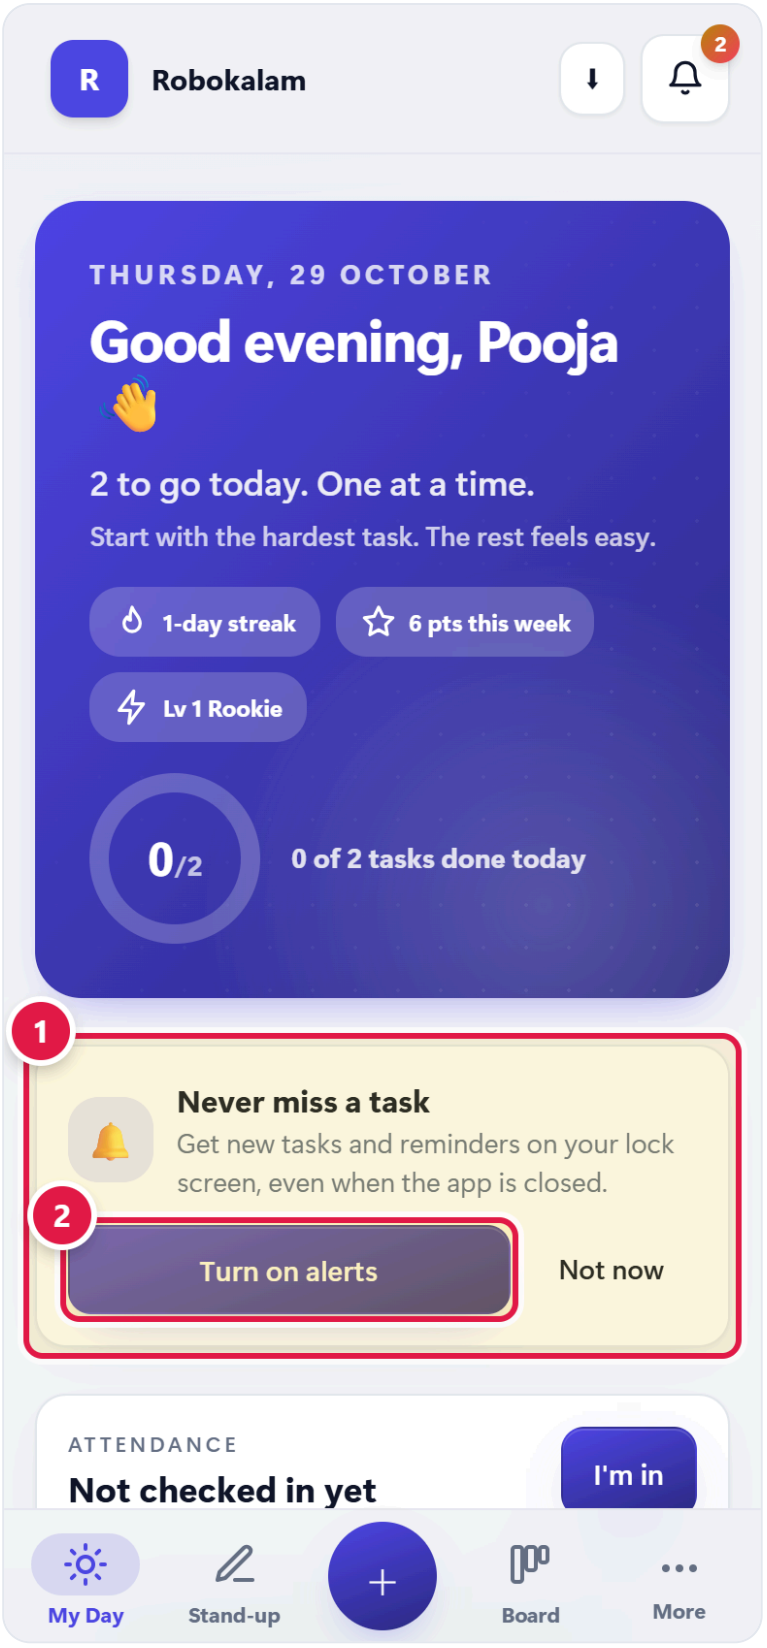

Lock-screen notifications

New tasks, blockers, sent-back work, reminders and kudos appear as a normal alert on your phone, even when KalamDesk is closed. Tap one and KalamDesk opens on that task.

06 Turn alerts on from My Day

Everyone · About 1 min

Until you decide, My Day shows a small card offering to turn alerts on.

1 **Never miss a task.** The offer.

2 **Turn on alerts.** Tap it, then tap **Allow** when your phone asks.

Good to know

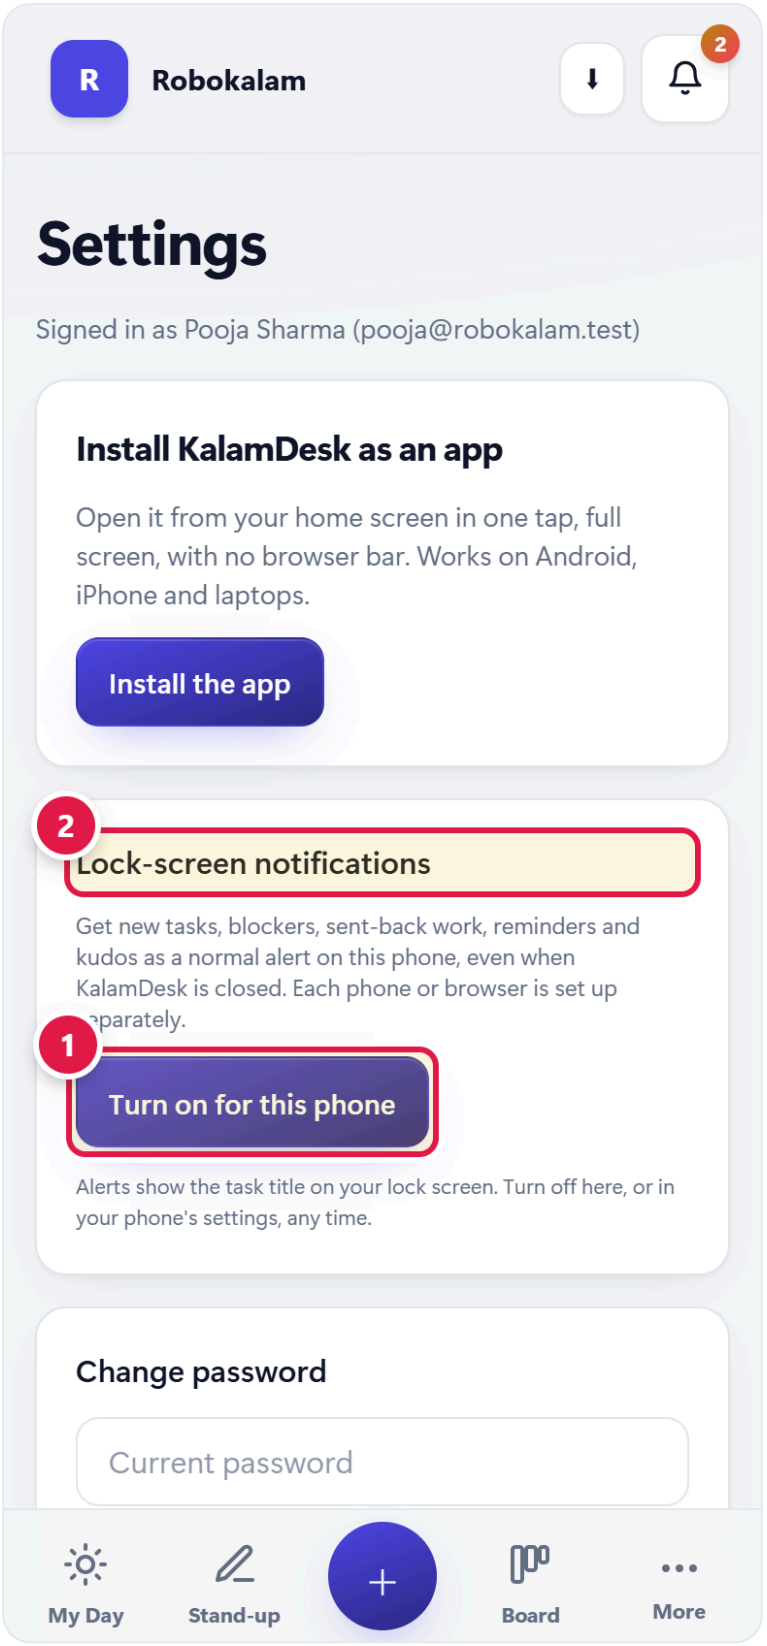

- **Not now**

  (next to the button) hides the card on this phone. You can still turn alerts on later in Settings.
- Each phone or browser is set up separately, so turn it on everywhere you want alerts.

07 Or turn them on in Settings

Everyone · About 1 min

Open **Settings** (on a phone: **More** → **Settings**) and find **Lock-screen notifications**.

1 **Turn on for this phone.** Tap it, then **Allow**.

2 **The card.** It explains what you will get, and it tells you if something stops it working on this device.

Good to know

- **iPhone and iPad:**

  alerts work once KalamDesk is on your Home Screen (iOS 16.4 or newer). The card tells you if you still need to do that.
- Blocked it by mistake? Open your phone's browser site settings for KalamDesk, set **Notifications**

  to

  Allow

  , and reload.

08 Check that it works

Everyone · About 1 min

Once it is on, the card changes. Send yourself a test to be sure.

1 **On for this phone.** Alerts are active here.

2 **Send me a test.** A test alert should appear on your lock screen within seconds.

3 **Turn off.** Stops alerts on this phone. Nothing else changes.

Good to know

- **You will get alerts for:**

  a new task, a task marked blocked, work sent back, reminders (due in 2 hours, overdue), approvals and kudos. Long digests stay in email.
- Tapping an alert opens KalamDesk on that exact task.
- The alert shows the task title on your lock screen. If that is private for you, keep alerts off, or hide previews in your phone's own notification settings.
- Your phone's own settings can switch KalamDesk alerts off at any time.

NEW · PART 3

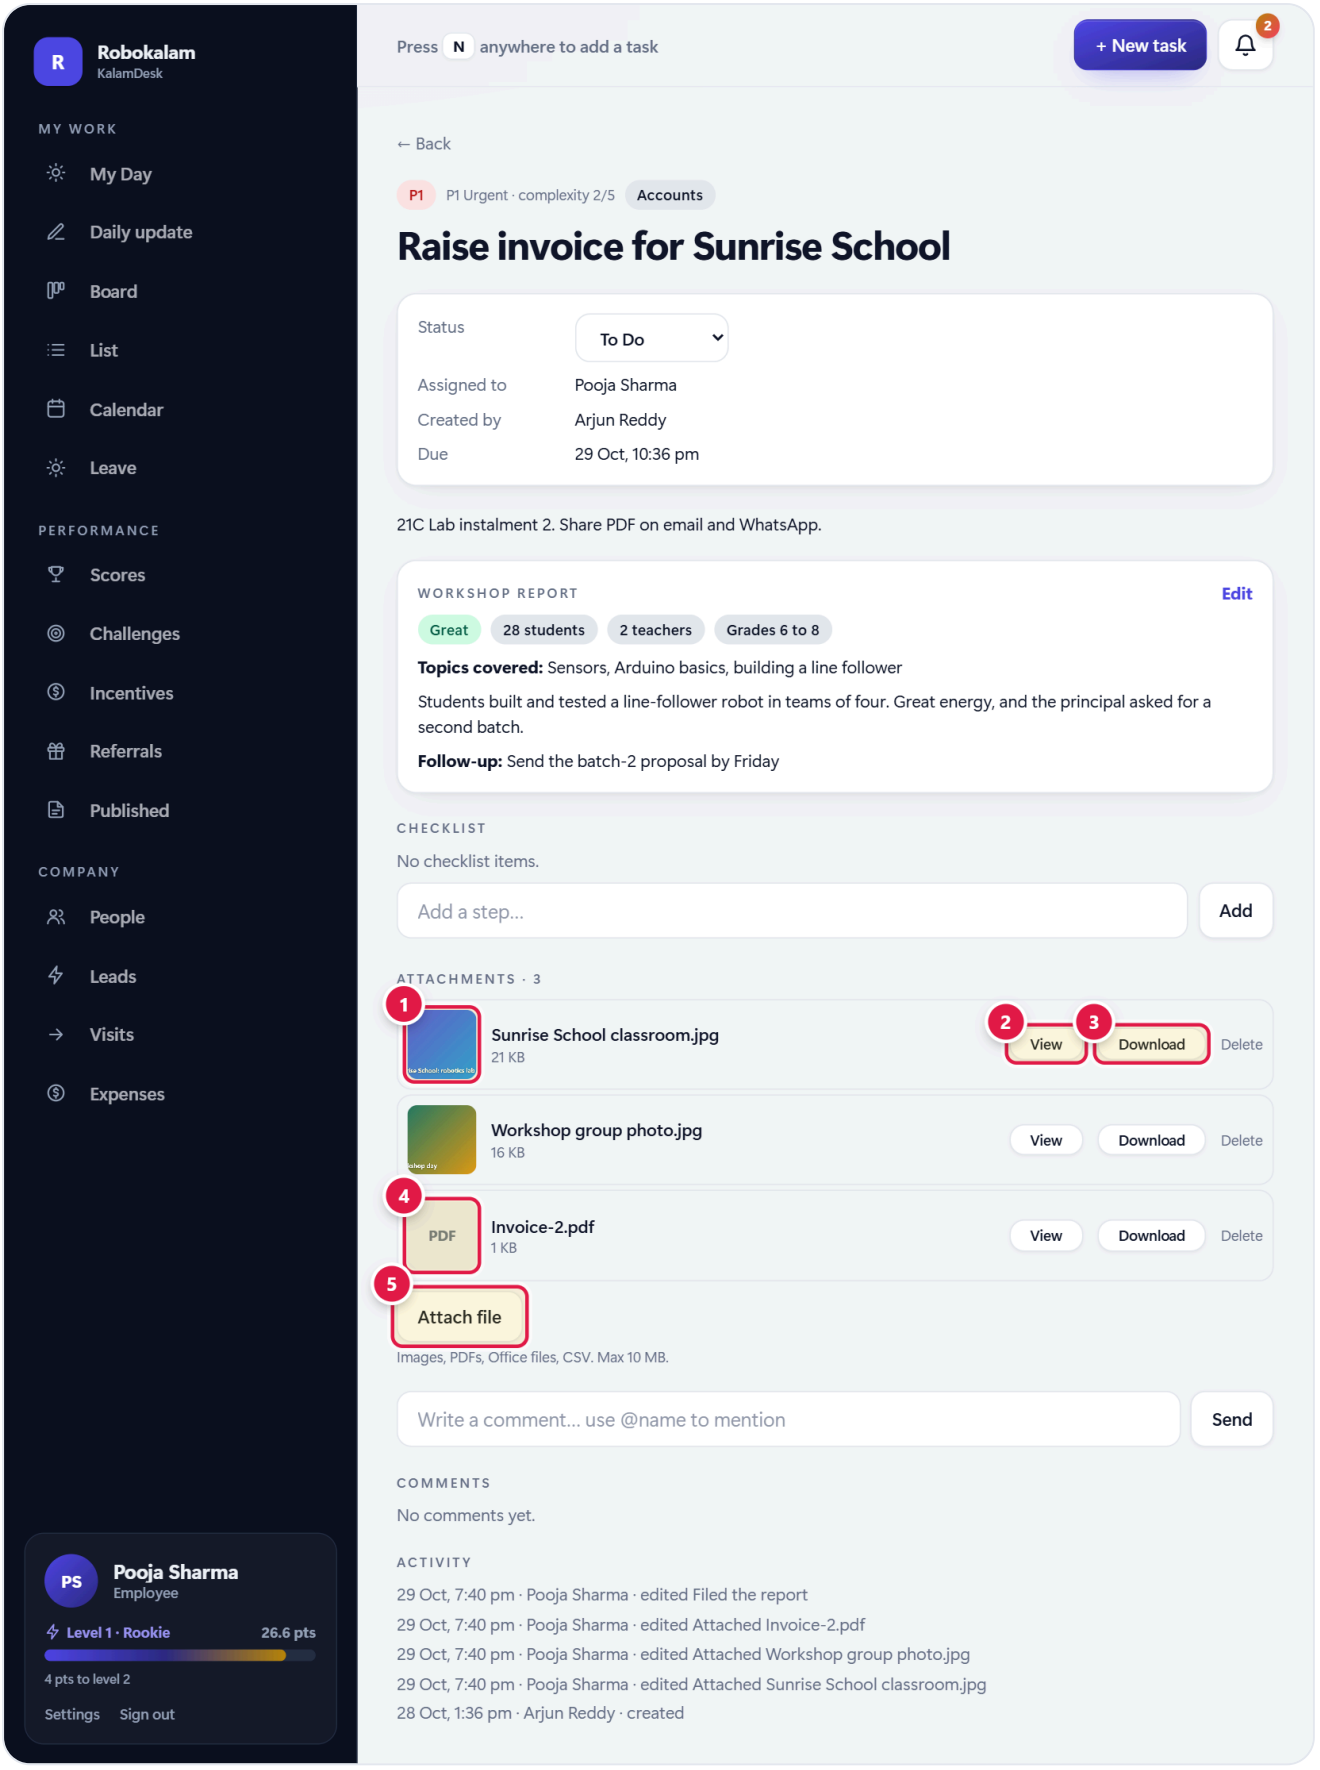

Photos and files you can actually open

Attachments now show as thumbnails, open in the browser, and are stored safely so they are no longer lost when the website is updated.

09 View, download and attach

Everyone · About 2 min

Open any task and scroll to **Attachments**.

1. **A photo thumbnail.** Click it to see the photo full size in a new tab.
2. **View.** Opens a photo or a PDF in the browser. For Word, Excel and other files it says **Open** and downloads them.
3. **Download.** Saves a copy to your device.
4. **A document tile.** PDFs and other files show their type instead of a picture.
5. **Attach file.** Add photos, PDFs, Office files or CSV, up to 10 MB each.

Good to know

- **Why this changed:**

  files used to be kept inside the website's own folder, which is replaced every time the site is updated, so older attachments could stop opening. They are now kept in the database, which updates do not touch and your backups include.
- **Files uploaded before this change may be gone.**

  If one will not open, attach it again.
- KalamDesk now checks that a file really is what it claims to be. A web page renamed to `.jpg` is refused.
- Expense receipts open the same way: click **view receipt** on a claim.

NEW · PART 4

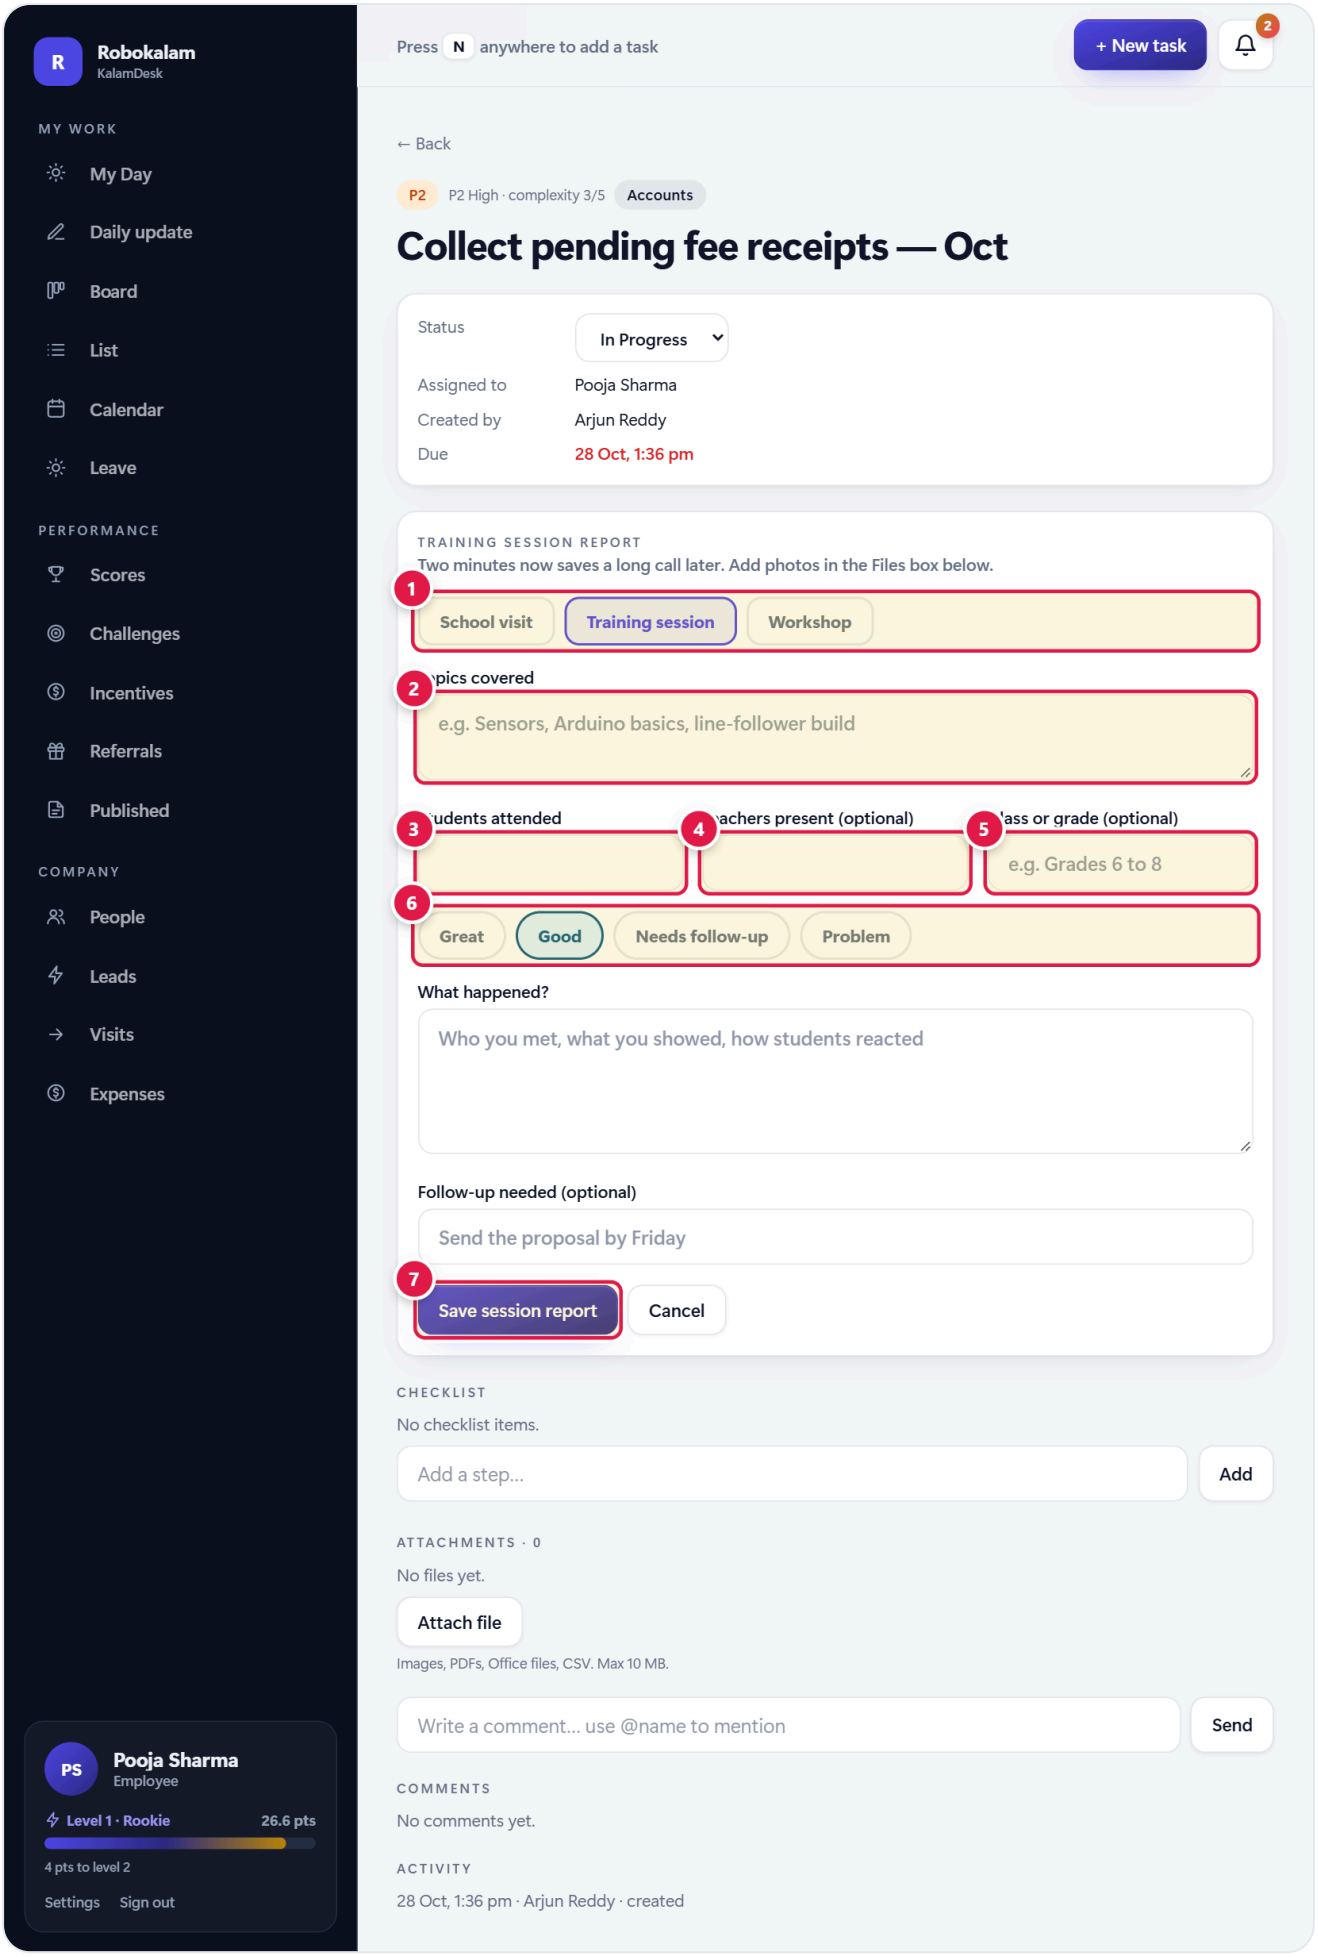

Reports for visits, training sessions and workshops

Record what was covered and how many students came, for school visits, training sessions and workshops.

10 Fill in the report

Everyone About 3 min

Every task now has a **+ Add a visit, session or workshop report** button. It opens straight away on visit tasks.

ACTIVITY
28 Oct, 1:36 pm · Arjun Reddy · created

1. **What kind of activity was it?** School visit, Training session or Workshop. KalamDesk guesses from the task title, so you rarely need to change it.
2. **Topics covered.** For example *Sensors, Arduino basics, line-follower build*.
3. **Students attended.** The number of students who took part.
4. **Teachers present** (optional).
5. **Class or grade** (optional), for example *Grades 6 to 8*.
6. **How did it go?** Great, Good, Needs follow-up or Problem. A **Problem** alerts the founders at once.
7. **Save.** The button names the kind, for example **Save session report**.

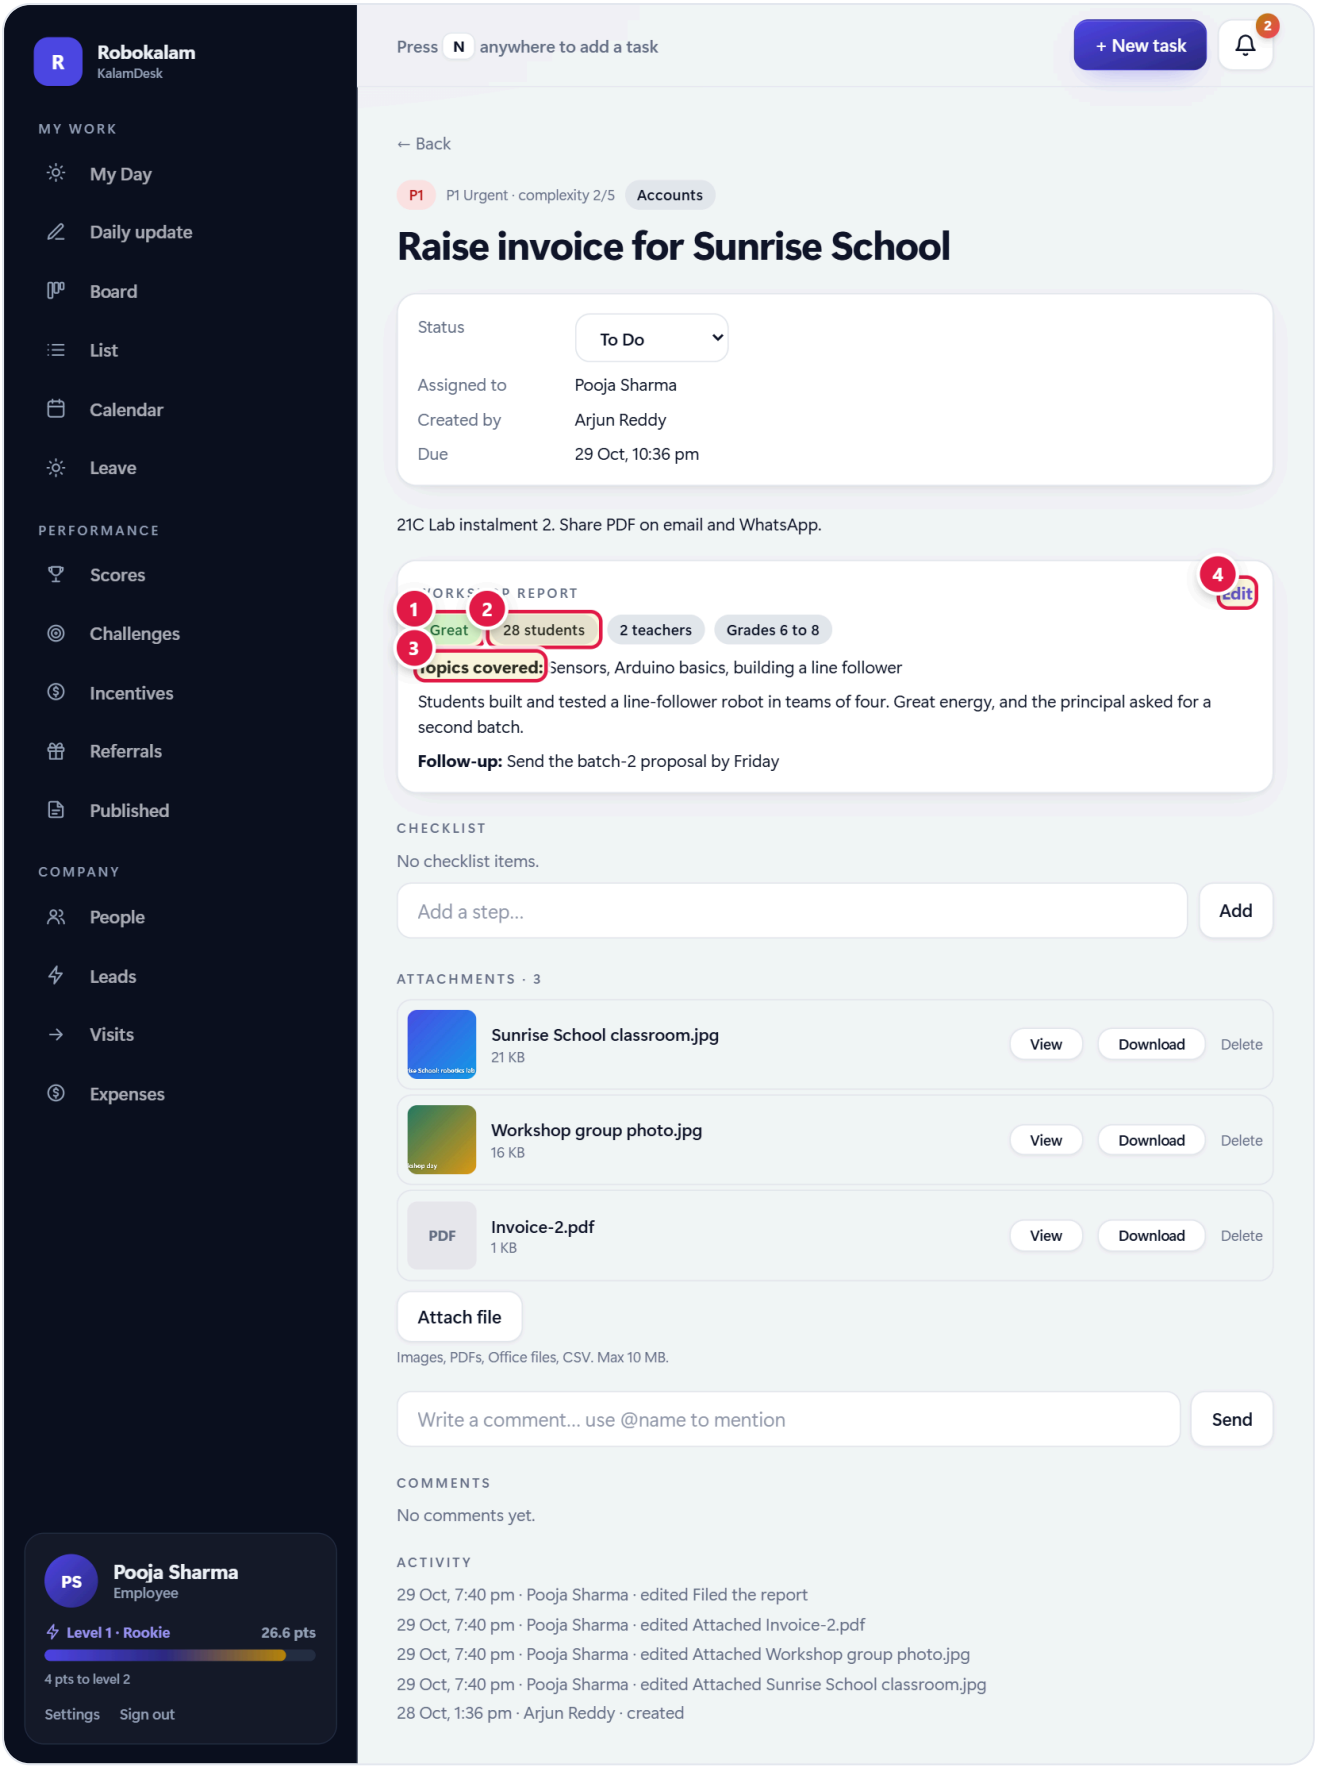

Good to know

- Below the form,
  What happened?
  and
  Follow-up needed
  are still there. Add photos with
  Attach file
  on the same task.
- Saved by mistake or something changed? Click
  Edit
  on the saved report.

11 The saved report

Everyone · About 1 min

After you save, the form is replaced by a neat summary at the top of the task.

1. **How it went.** The coloured tag.
2. **Students attended.** Next to it: teachers and class or grade.
3. **Topics covered.** What the session was about.
4. **Edit.** Change anything and save again.

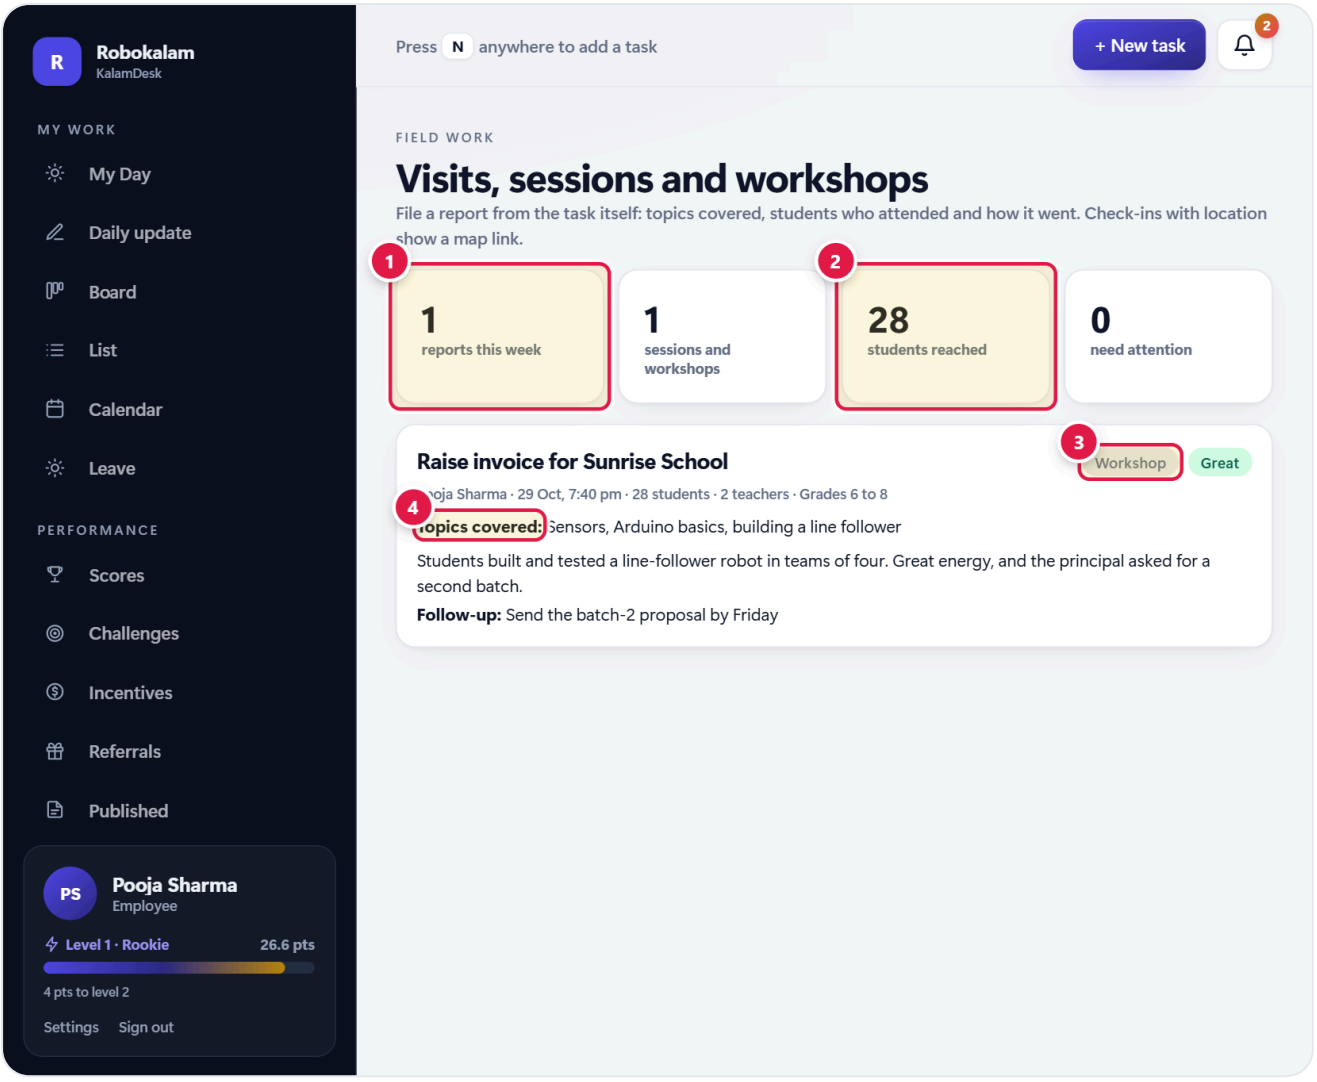

Good to know

- The follow-up you wrote is shown underneath, and founders are told when a report says *Needs follow-up* or *Problem*.

12 The Visits page: totals at a glance

Everyone · About 1 min

Visits in the menu is now **Visits, sessions and workshops**. It lists every report you can see, newest first.

1. **Reports this week.**
2. **Students reached** this week.
3. **The kind of activity.** Visit, Session or Workshop.
4. **Topics covered**, students, teachers and class on every report.

Good to know

- Beside them, **sessions and workshops**

counts those two kinds this week, and
need attention
counts reports that need follow-up.

- Employees see their own reports. Managers see their team's. Founders see everyone's.

NEW · PART 5

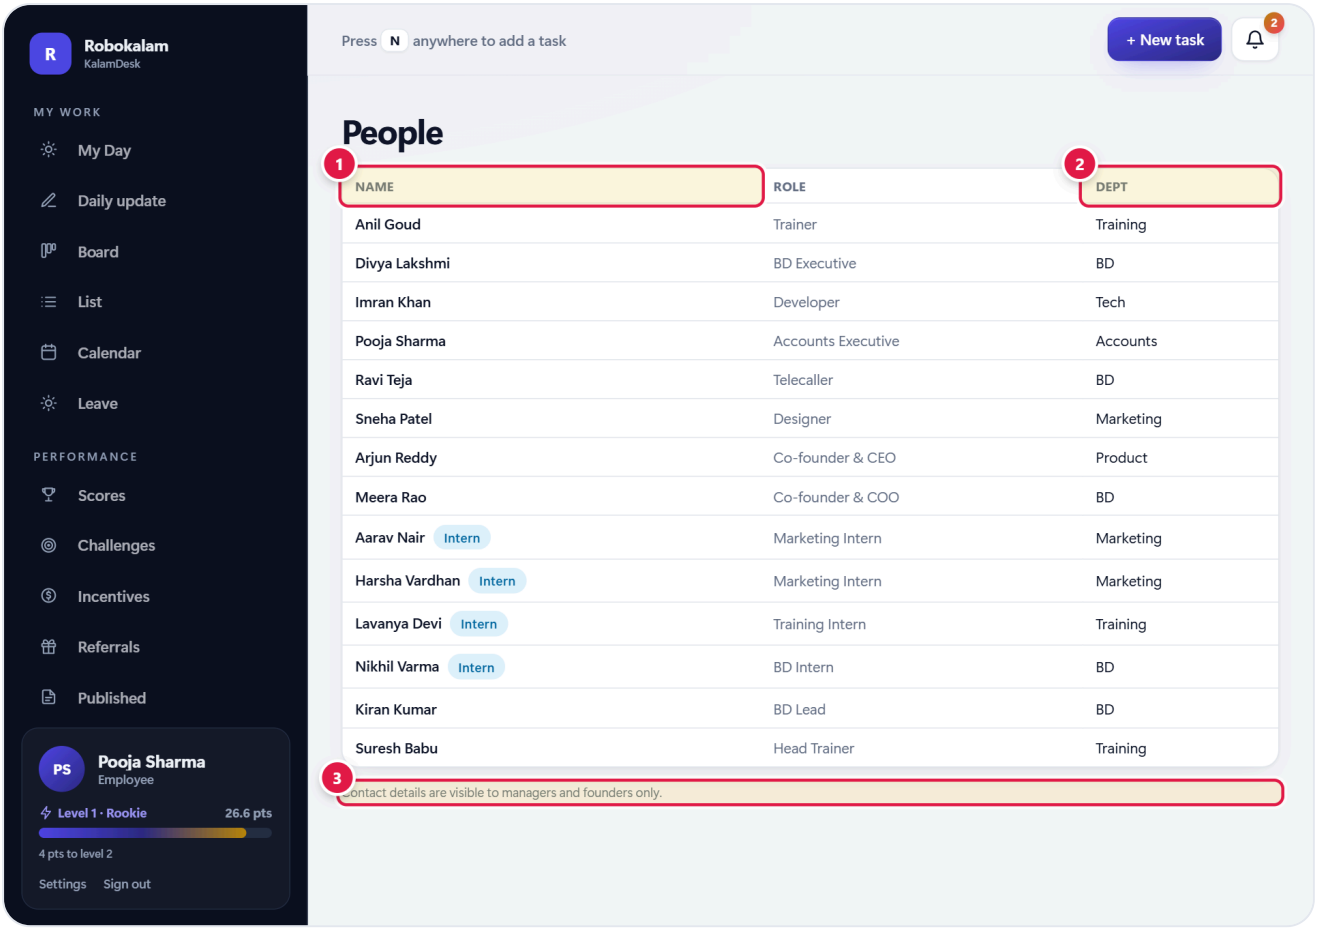

What employees and interns see

Employees and interns now see only what they need: their own work, and a names-only directory of colleagues.

13 A names-only People directory

Everyone About 1 min

Employees and interns can still see who works in their organisation, so they can add a teammate to a task. Contact details are private.

1. **Name.** Every active person in your organisation.
2. **Dept.** Their department.
3. **The note.** *Contact details are visible to managers and founders only.* Email, phone, office and who reports to whom are hidden.

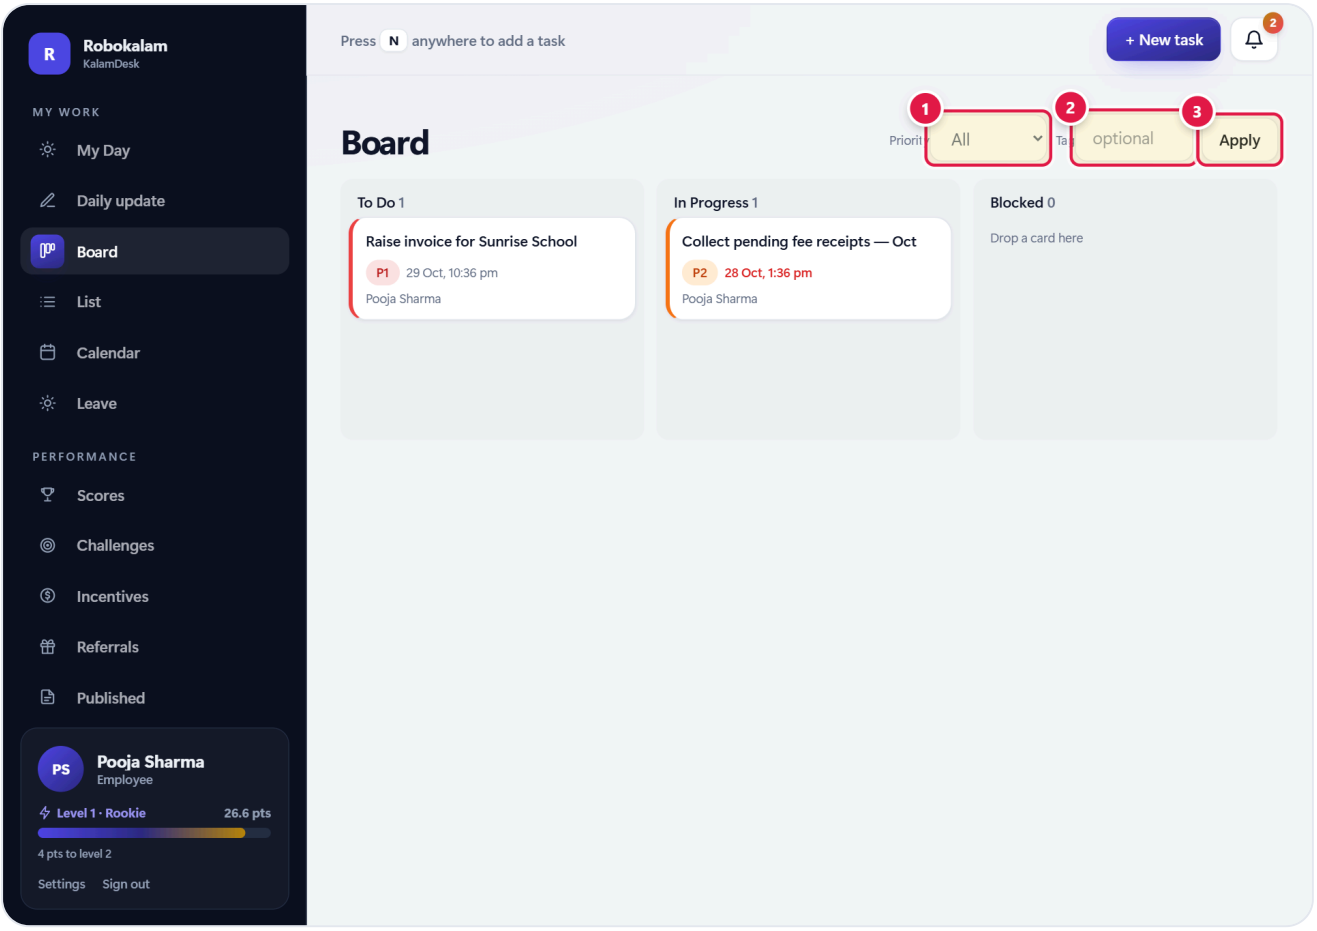

Good to know

- Managers and founders keep the full table.
- Only people in your own organisation are ever listed.

14 Simpler filters for employees and interns

Everyone · About 1 min

On **Board**, **List** and **Calendar**, employees and interns only ever see their own tasks, so the person and department pickers are gone.

1. **Priority.** P1 to P4.
2. **Tag.** Type a tag to narrow the view.
3. **Apply.**

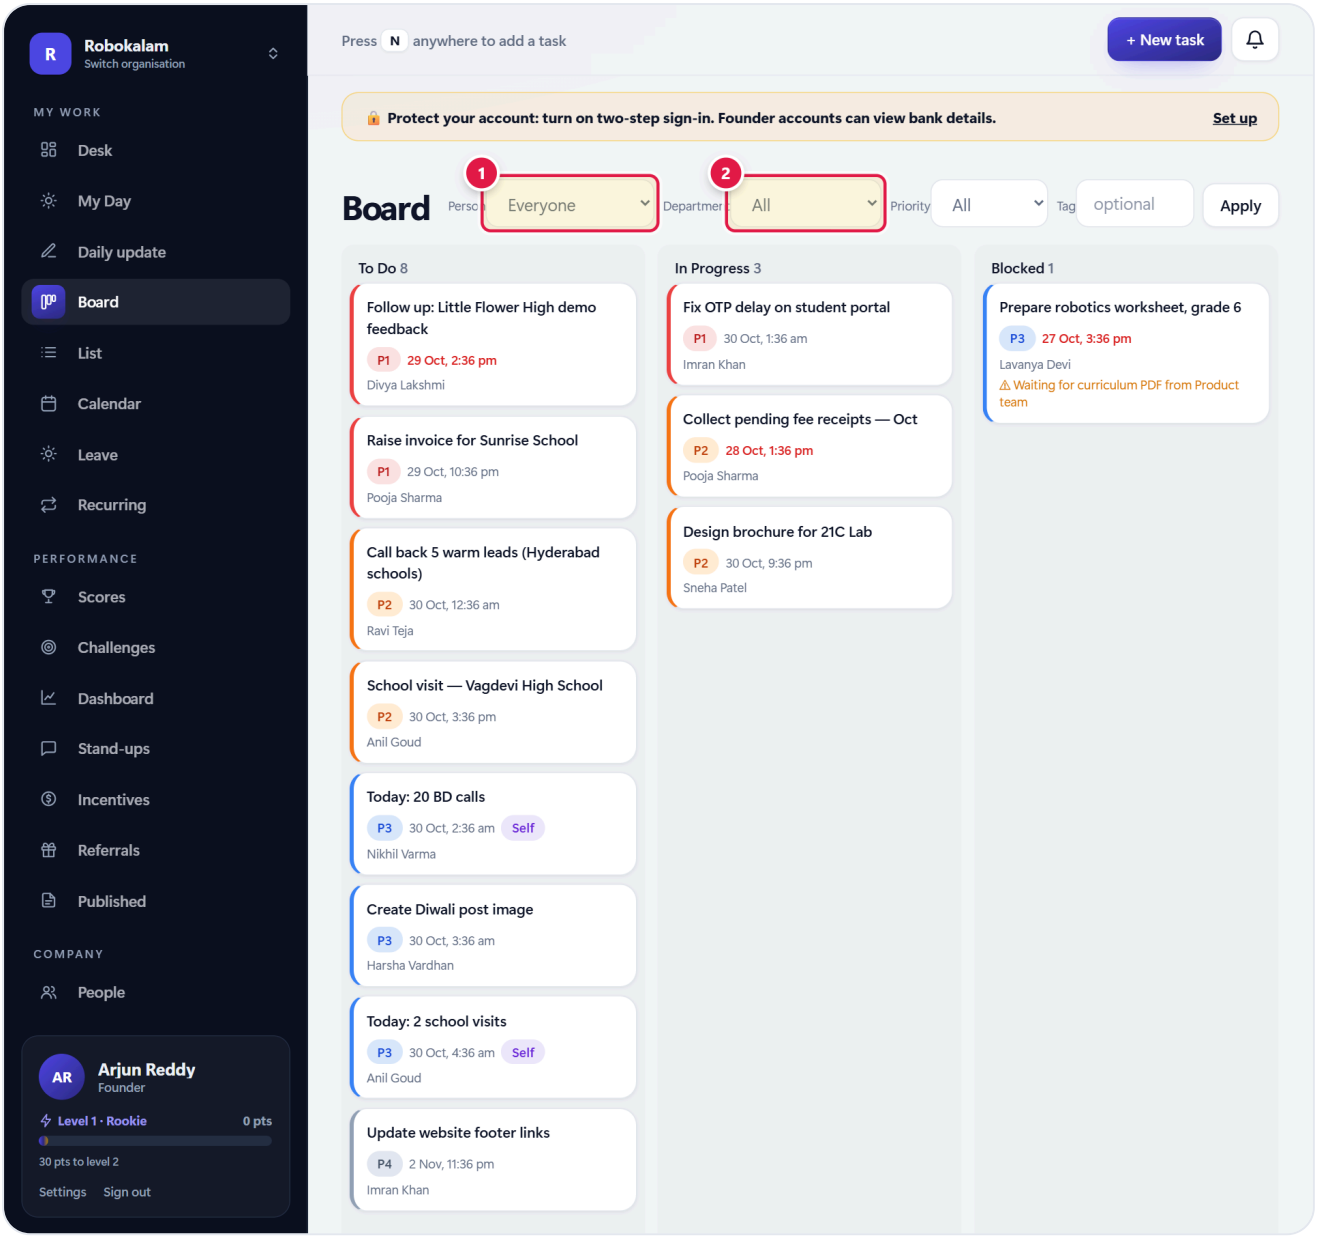

Good to know

- Nothing else about your own work changes.

15 What managers and founders still have

Managers & founders About 1 min

Managers and founders get two extra pickers, to look at one person or one department, or at the whole team.

1. **Person.** Choose someone, or Everyone.
2. **Department.** Choose a department, or All.

Good to know

- Managers see their own team. Founders see the whole organisation.

NEW · PART 6

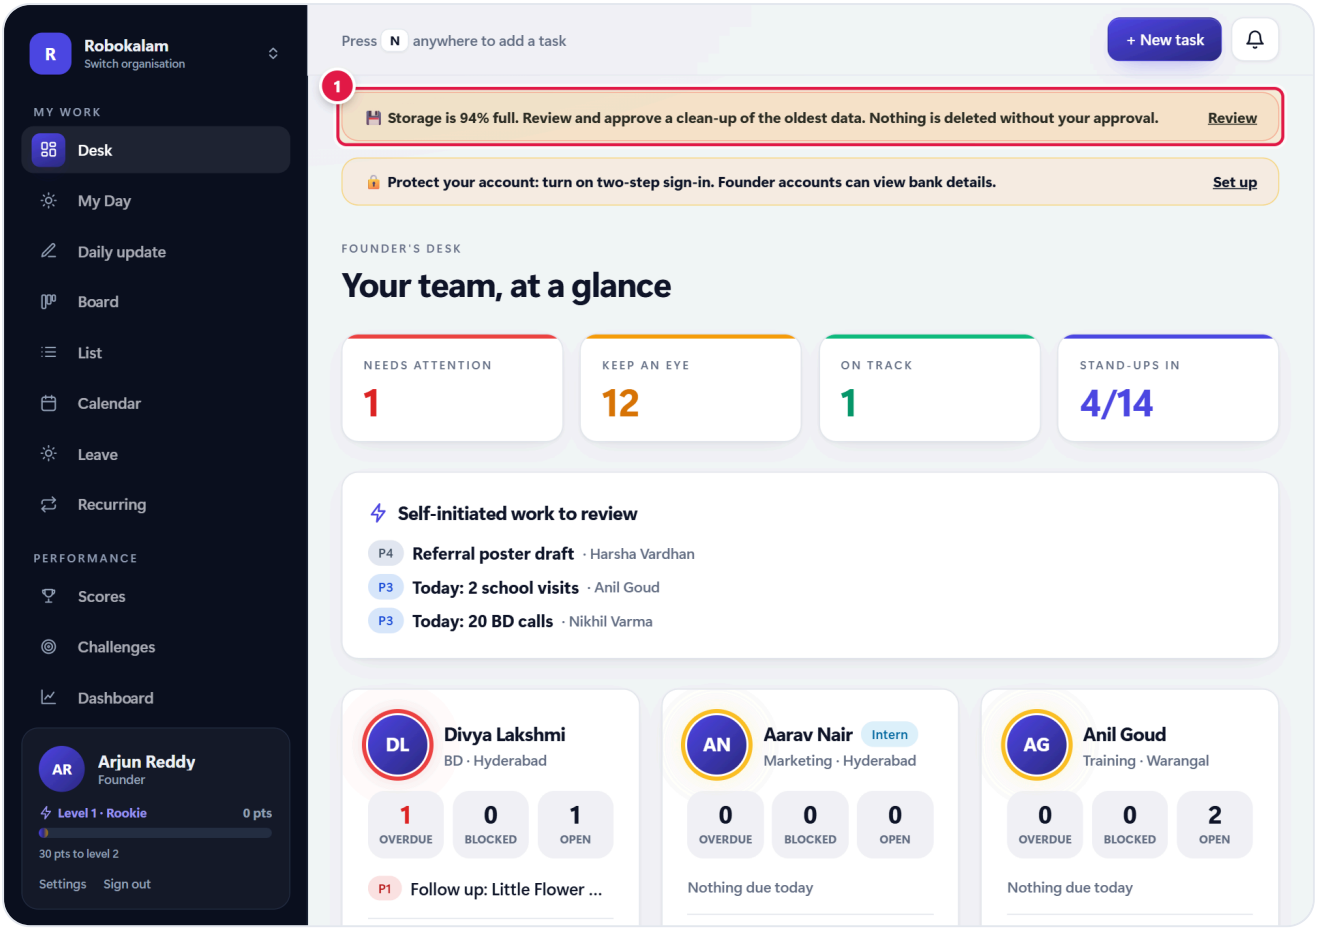

Storage: kept tidy, with your approval

The database has a size limit (2 GB by default). KalamDesk watches it, asks a group owner before deleting anything, and always removes the oldest first.

16 The warning

Group owners · About 1 min

At **80% full** group owners get a notice. At **90% full** a red banner appears at the top of every screen, and a request arrives by bell and email once a week.

1. **The red banner.** It shows how full storage is. Nothing is deleted. Click it to review.

2. **Organisations** in the menu. The Storage panel is at the bottom of that page.

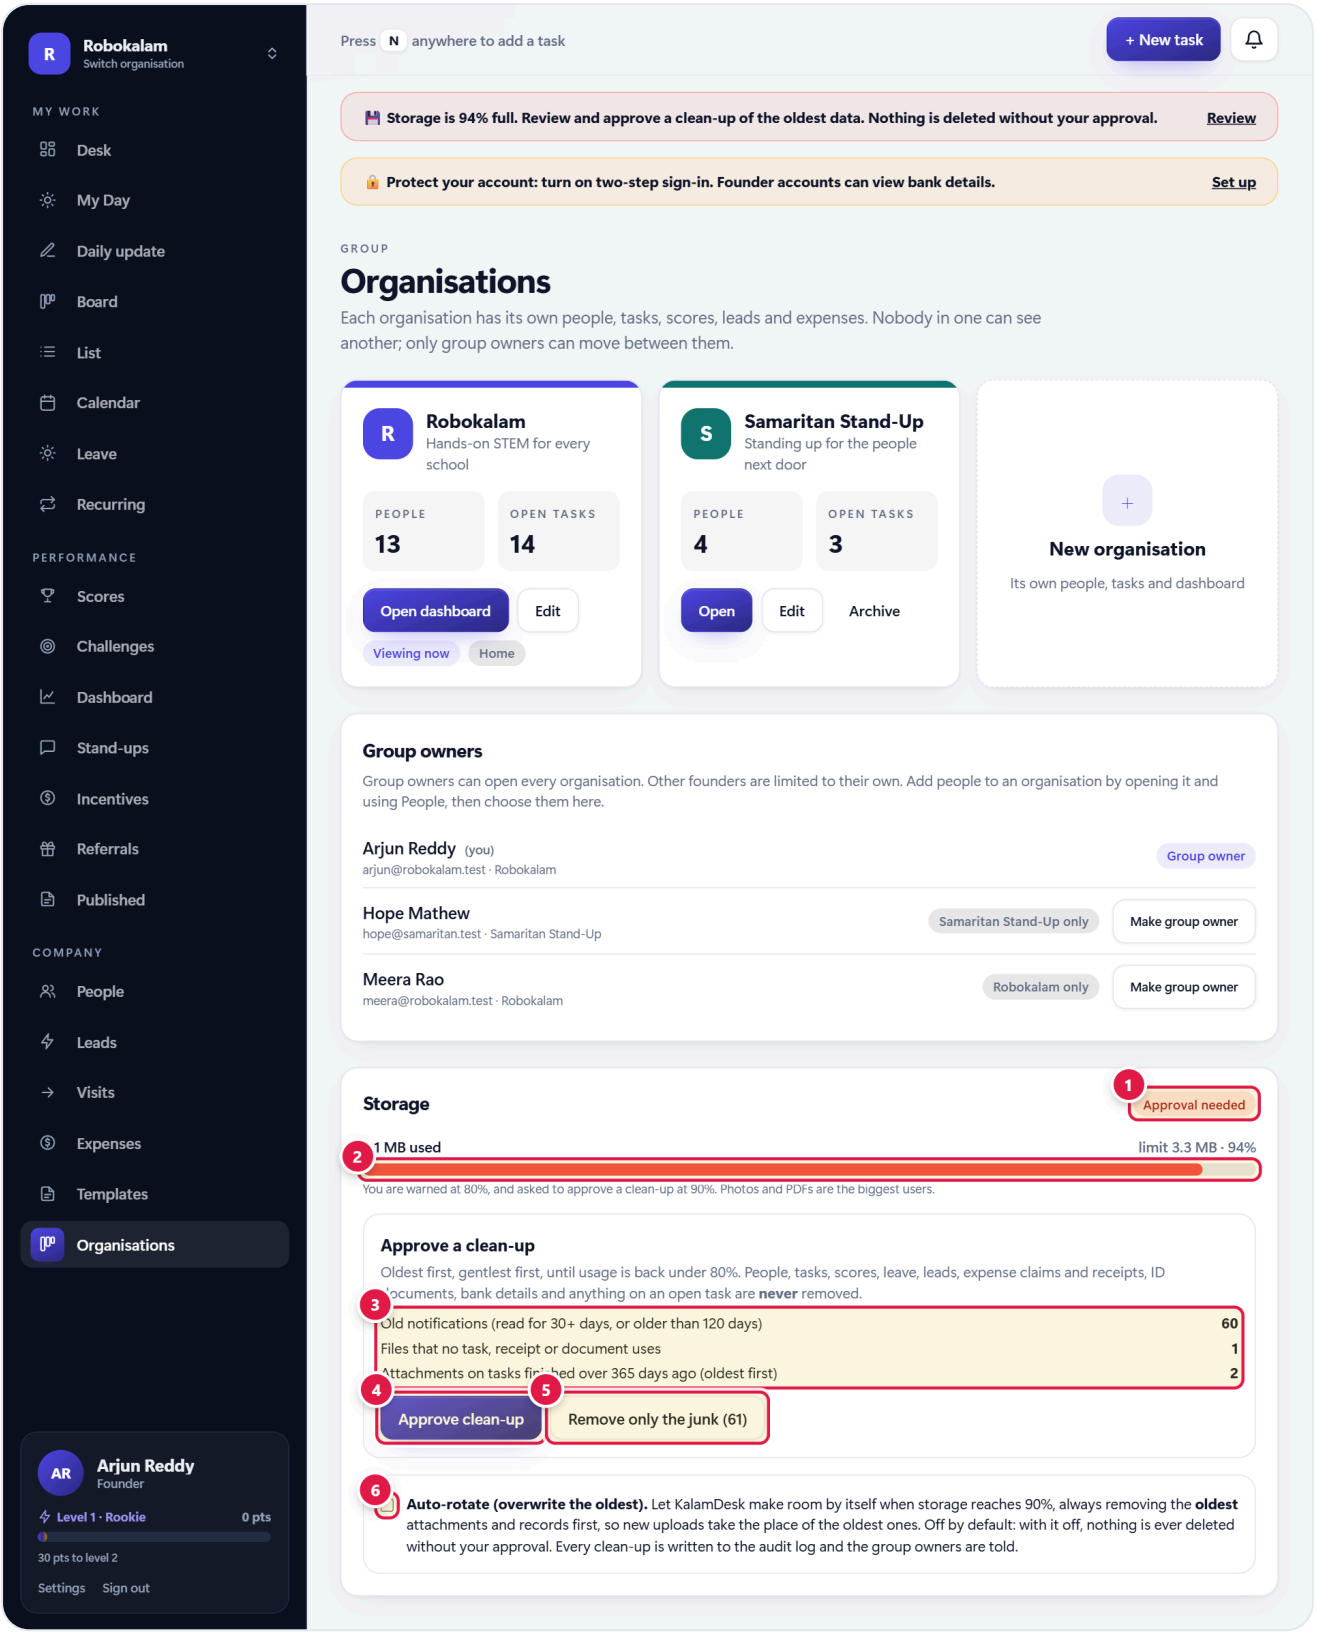

Good to know

- Only group owners see the banner and the Storage panel. The database is shared by every organisation.
- The screenshots use a tiny demo limit so the warning triggers. On your site the limit is 2 GB.

17 Review and approve

Group owners · About 3 min

The **Storage** panel shows the usage, and lists exactly what an approved clean-up would remove.

1 **The status.** *Healthy*, *Getting full* or *Approval needed*.

2 **The bar.** How much of the limit is used.

3 **What would be removed.** Old notifications, files that nothing uses, and attachments on tasks finished long ago, oldest first. Nothing is removed yet.

4 **Approve clean-up.** Deletes exactly that list, then stops once usage is back under 80%.

5 **Remove only the junk.** The harmless part only: old notifications and unused files. Available any time.

6 **Auto-rotate (overwrite the oldest).** Optional. Tick it and KalamDesk makes room by itself at 90%, always removing the **oldest** first, so new uploads take the place of the oldest ones. Off by default.

Good to know

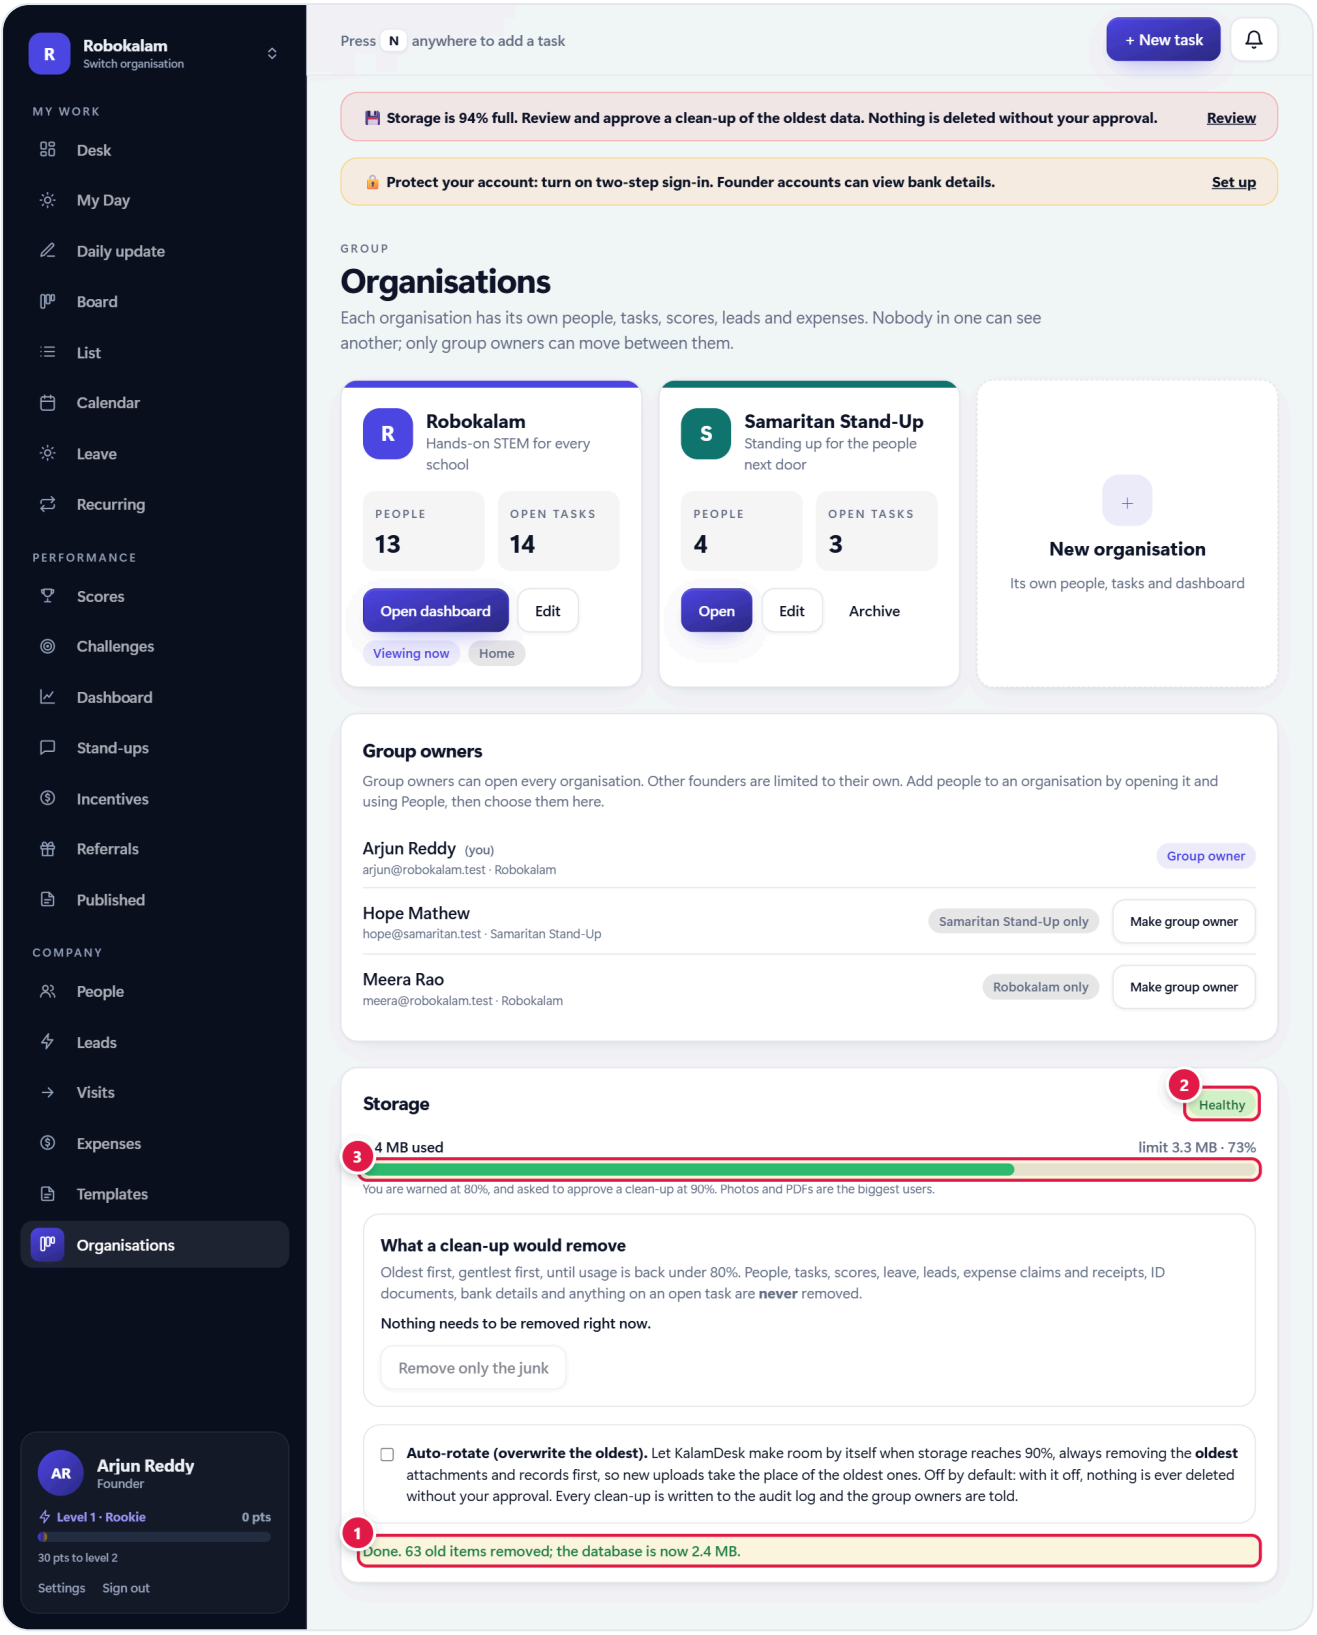

- **Never removed automatically:**

  people, tasks, scores, incentives, leave, leads, expense claims and their receipts, ID documents, bank details, and anything on a task that is still open. Files younger than 30 days are never touched.
- Want a copy first? Use the company data export. It saves your records but not the photos.
- Every clean-up is written to the audit log with who approved it, and the other group owners are told.

18 After the clean-up

Group owners · About 1 min

When it finishes, the panel reports what happened.

1 **The result.** How many old items were removed and the new size.

2 **Healthy** again.

3 **The bar** is back under the limit.

Good to know

- Each affected task shows a line in its history: *old attachments were removed automatically to free up storage*.
- If usage is still over the limit, the rest is data that is deliberately never removed. Export what you need and ask your host about more space.

EXTRA

Upgrade checklist

For the person who looks after the website on Hostinger. Do these in order, before staff try the new features.

✓ Putting Version 2.0 live

Whoever manages Hostinger About 10 minutes

1. **Back up first.** In hPanel open **phpMyAdmin**, choose your database, and use **Export**.
2. In phpMyAdmin, open the **SQL** tab and run `prisma/phase6-push-upgrade.sql` (paste all of it, click Go). It adds two tables for lock-screen notifications. Run it **once**.
3. Run `prisma/phase7-files-reports-upgrade.sql` the same way. It adds the file table and four columns for the new reports. Run it **once**.
4. **Redeploy** from GitHub in Hostinger.
5. Open `your-site/api/health` and check **pushSchema: true** and **filesInDatabase: true**.
6. Optional: add `DB_LIMIT_MB` in the environment variables to change the 2 GB storage limit (for example `1024`). `STORAGE_AUTOCLEAN=off` switches Auto-rotate off for good.
7. Tell the team: **install the app**, **turn on lock-screen alerts**, and **re-attach** any file that no longer opens.

Heads-up: files saved before this version may already have been lost when the website was last updated. They cannot be recovered. New uploads are safe from now on. The storage clean-up needs no database step of its own.

KalamDesk 2.0 · If something here does not match what you see, tell your founder so the guide can be fixed.
